

# Sling Finger Boom

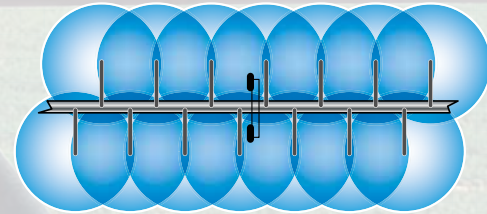

Putting Water In Its Place!

Truss Rod Hose Slings **WITHOUT** Sling Finger Booms at the tower.

Truss Rod Hose Slings **WITH** Sling Finger Booms at the tower.

The Sling Finger is a stand alone boom that allows for the attachment of a Hose Sling at the towers—replicating the full spread of the truss rods at mid-span. The length of the boom is 75" from the center of the pipe with a 48" brace for stability. The Sling Finger Boom is available in all pipe sizes and needs no other bracing. To learn more about the many benefits of boombacks and to see the complete line of IACO booms go to [www.boombacks.com](http://www.boombacks.com).
